## PROJECTS

### Bikeshare Predicton Project

An open source project to predict bikeshare station availability. Built for Divvy Bikes & Alta Bikeshare. Built scrapers, API, and managed historical database of bikeshare data.

### Census Communities USA

A project with the US Census Bureau to provide an API for a variety of longitudinal employment datasets that the census hosts. Where we Work, a demo application, has been released.

### JuliaCon 2014

Organizer of JuliaCon 2014, the first conference for the Julia Language for scientific and statistical computing.

### Light Up the Loop

Helped build a smart lamp [LED strip & Raspberry Pi] for Chicago Public School Students. Lamp listens to twitter for #lightuptheloop and then flashes. Project was completed with the help of Inventables & Minimal.

### Truckate

Chicago Booth New Venture Challenge Finalist, was a webapp that utilizes onboard devices to allow online ordering and mapping for food trucks.

### William Morris Endeavor, Electronic Music Division

Designed and developed email templates and distribution framework for internal use.
